

Expandable container house

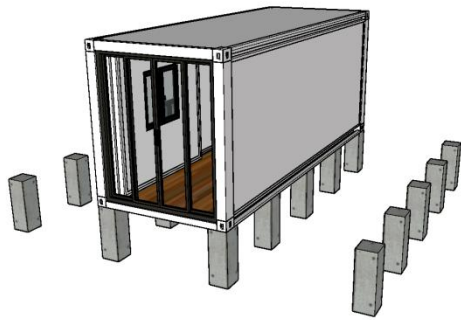

Install tutorial

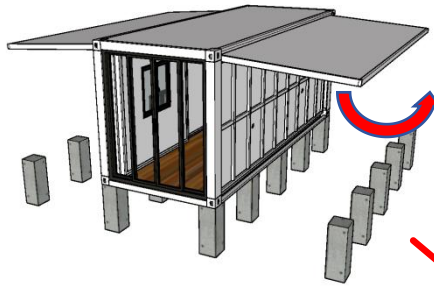

① Step 1: The base in the middle is 40 mm lower than the one on either side.

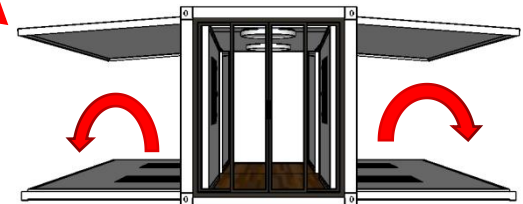

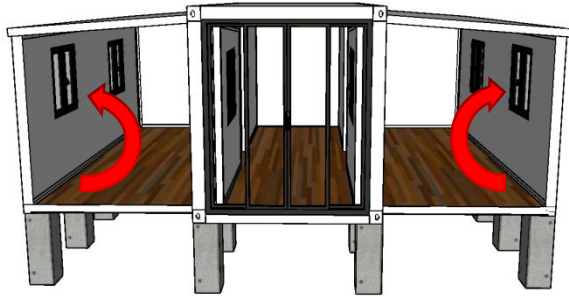

②Step2: Place the container on the middle base and align the base.

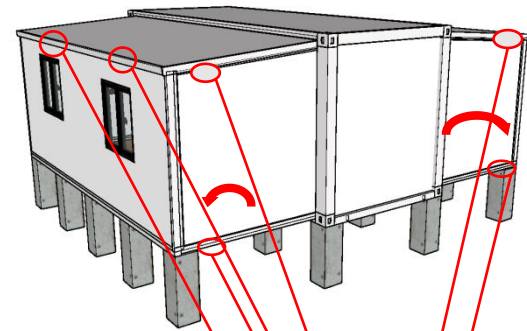

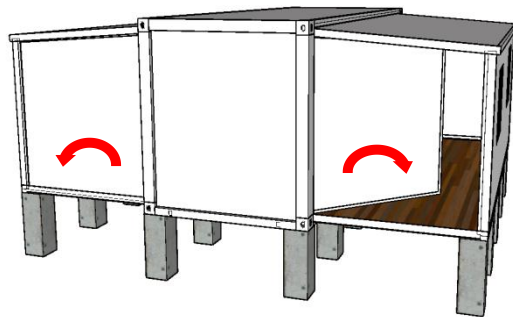

③Step3: Open the roof on both sides and support it with two columns.

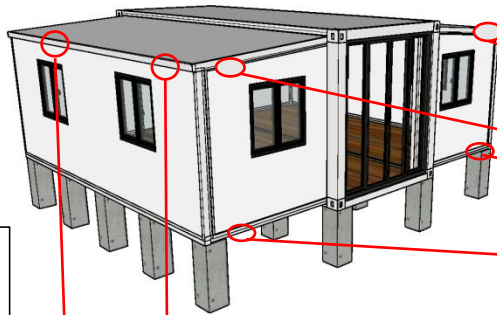

④Step4: Slowly lower the floor on either side.

⑤ Open the side walls on both sides.

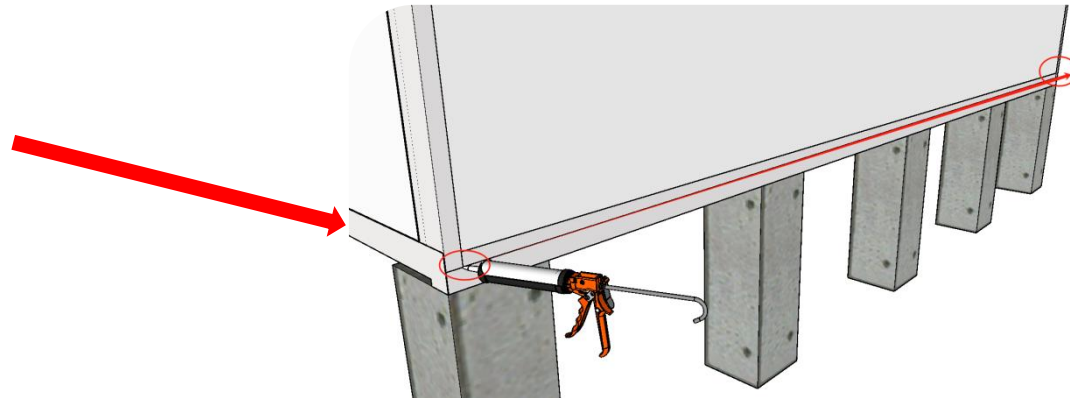

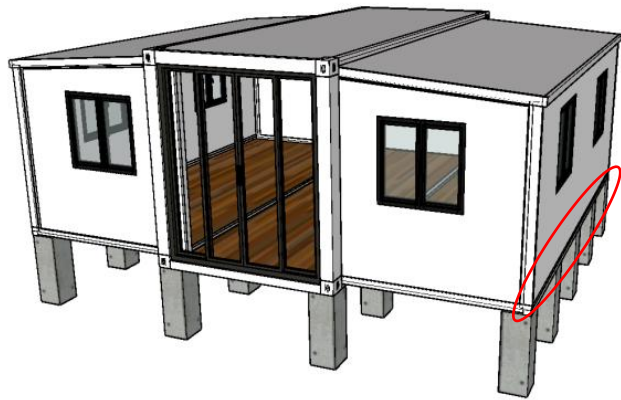

⑥ Open the 4 small walls, and tighten the bolts.

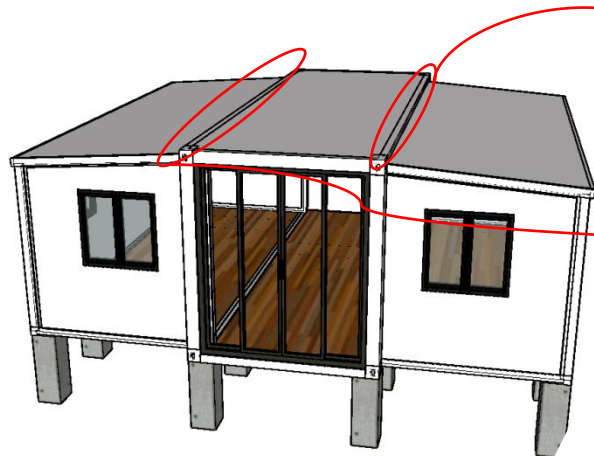

M10*110*8PC

M10*150*2PC

⑦ Tighten the mounting bolts, and there are 12 such nodes.

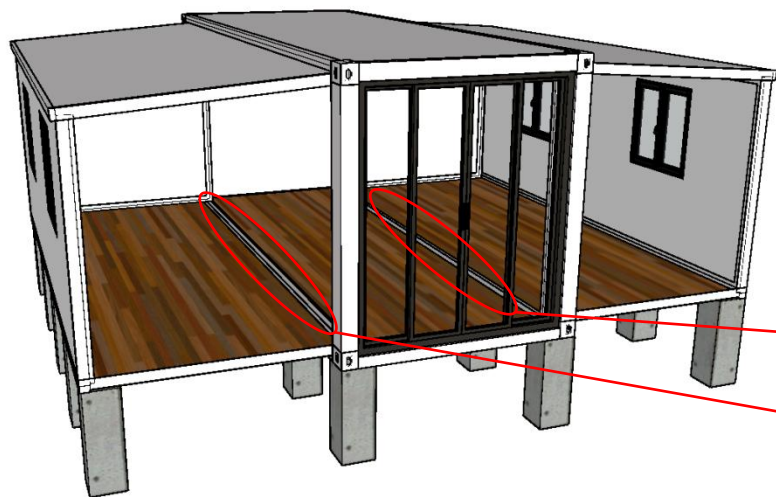

⑧The gap between the wall and the bottom frame, which is covered with structural glue. This gap exists on both sides.

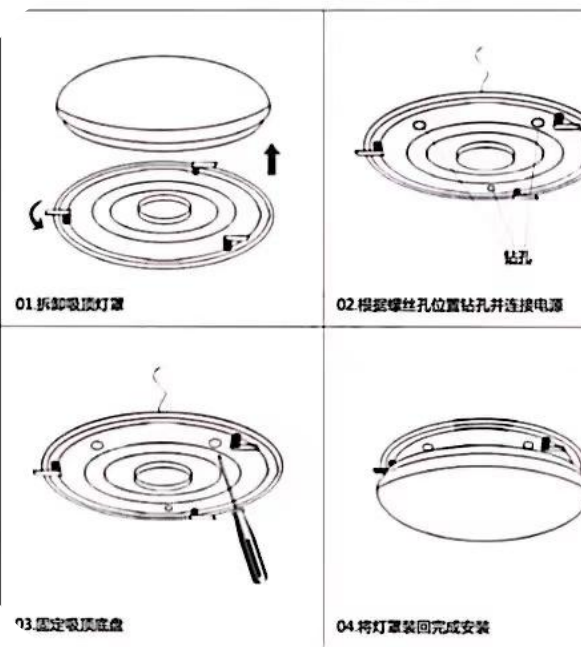

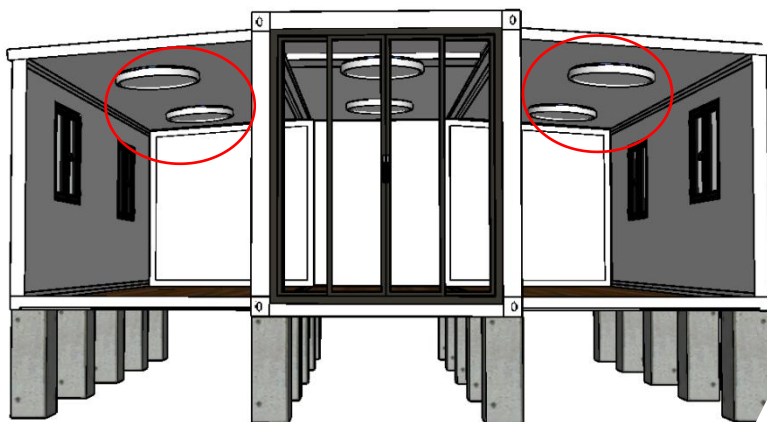

⑨these two places attach 200mm wide butyl tape.

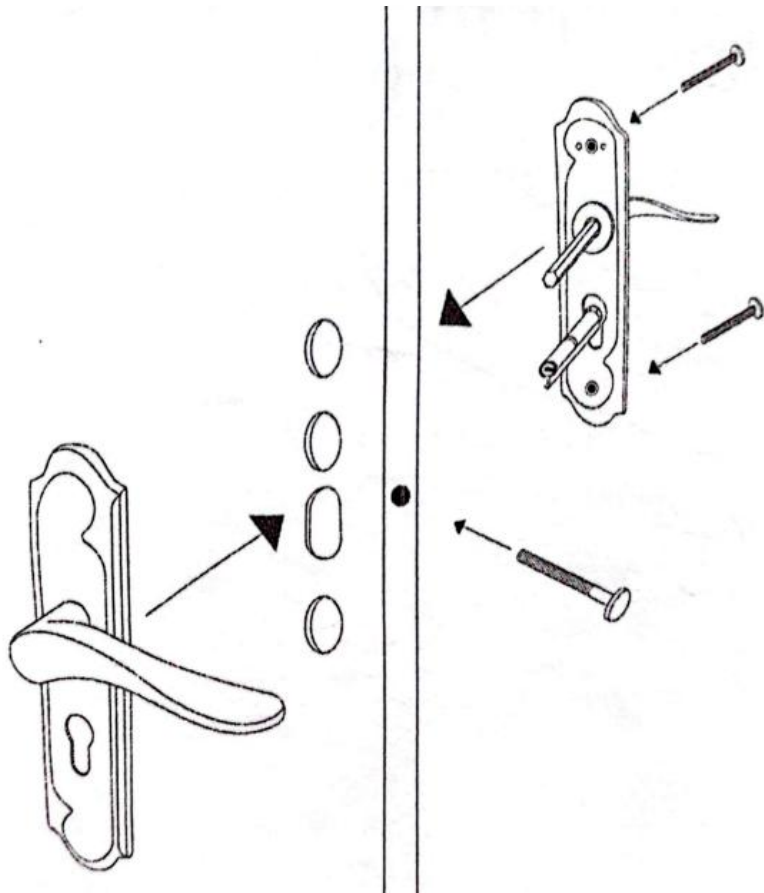

butyl tape

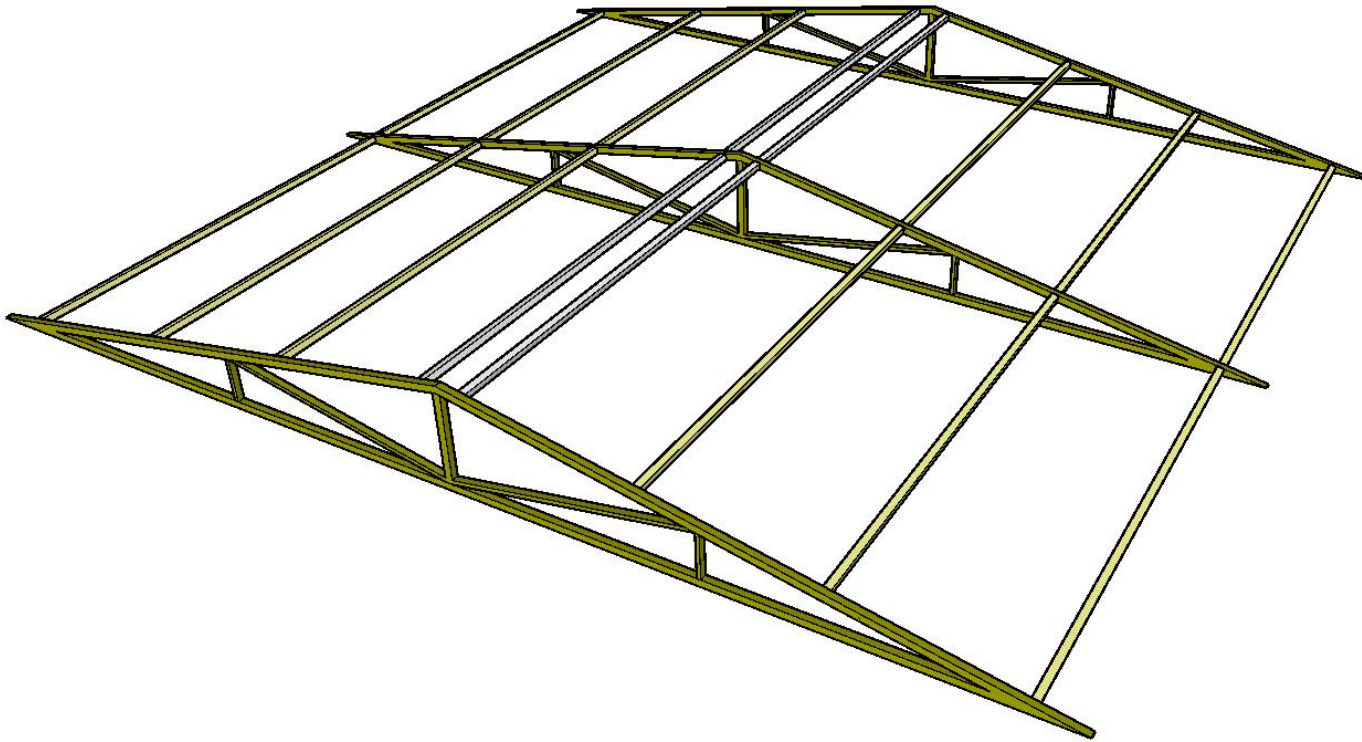

⑩ Install the buckle plate.

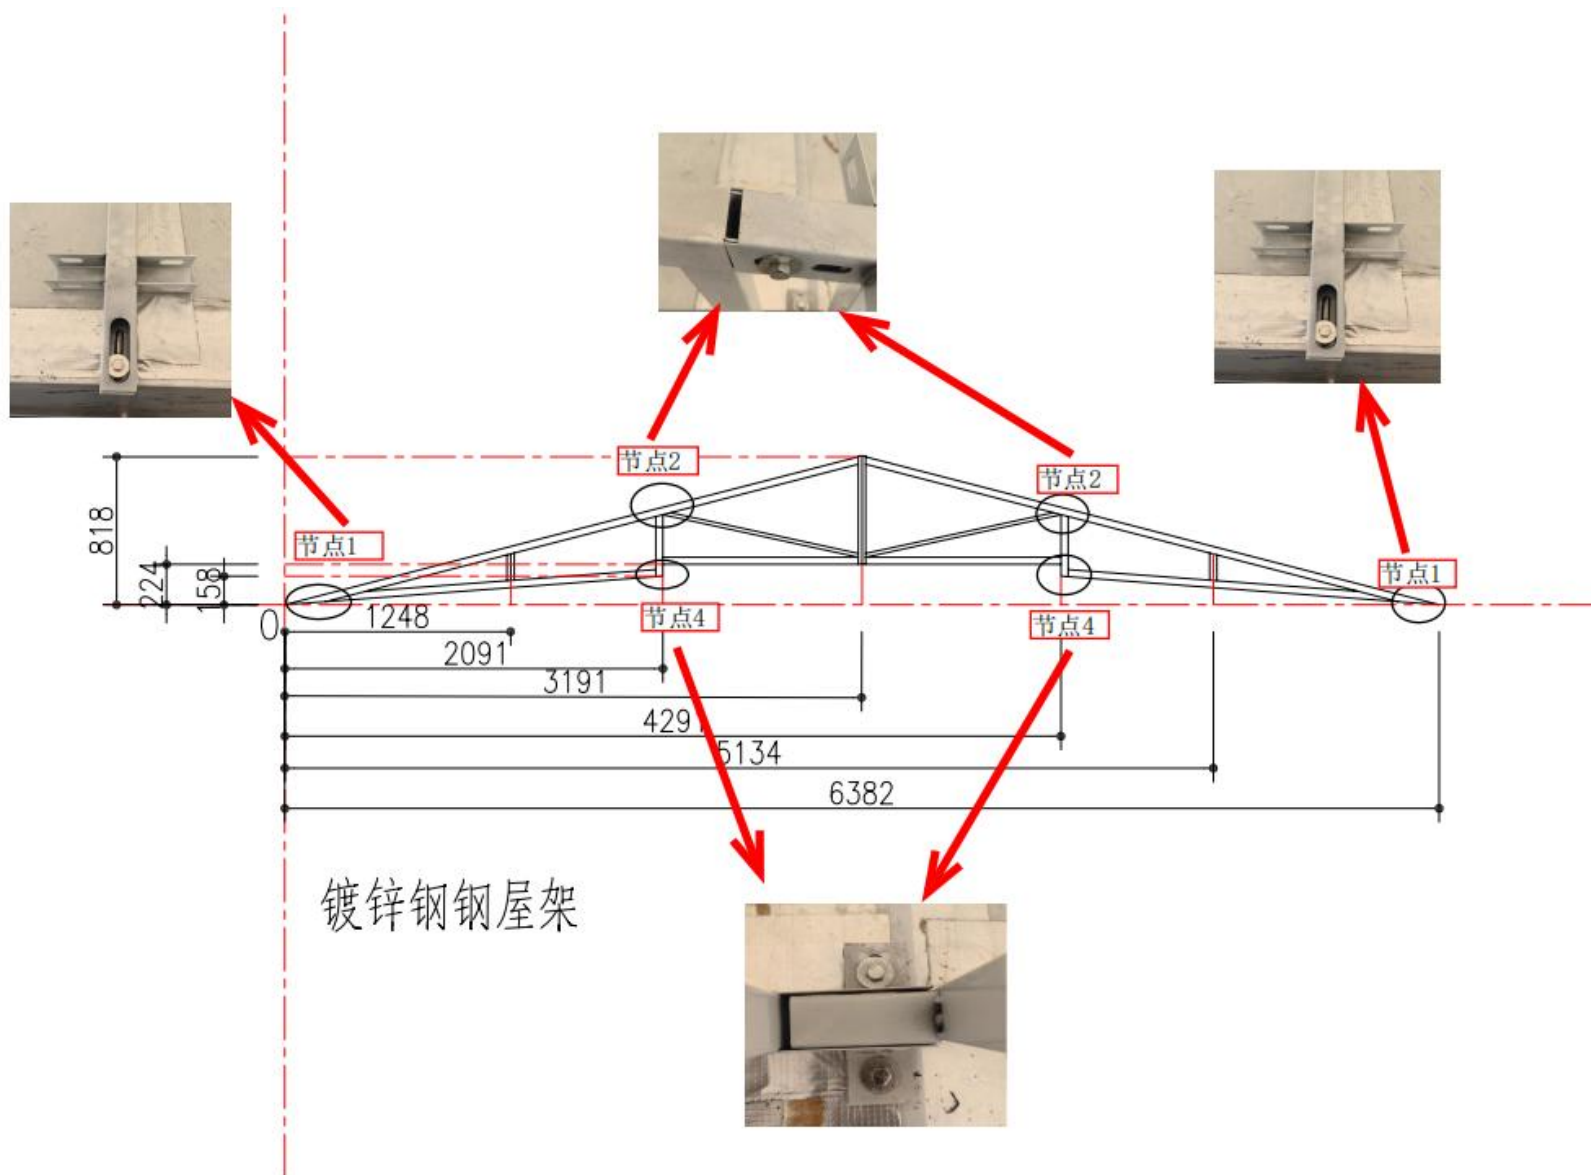

⑪ Install the lamp.

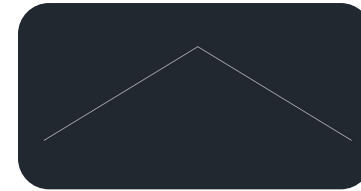

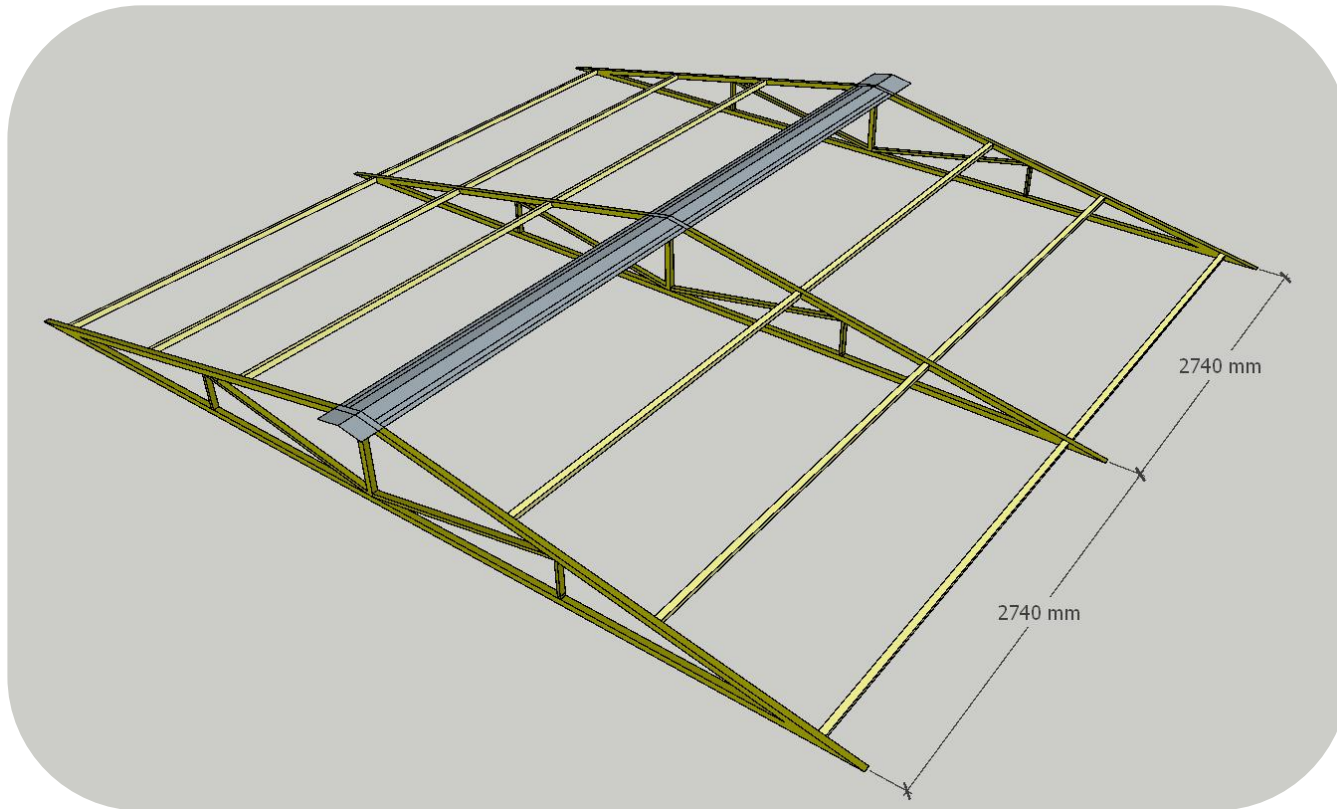

12 Install bedroom lock

Install steel roof truss and purlins.

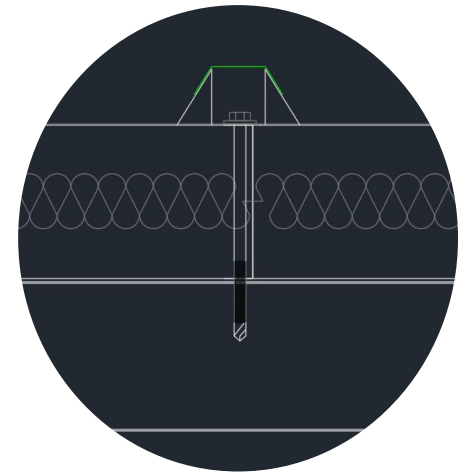

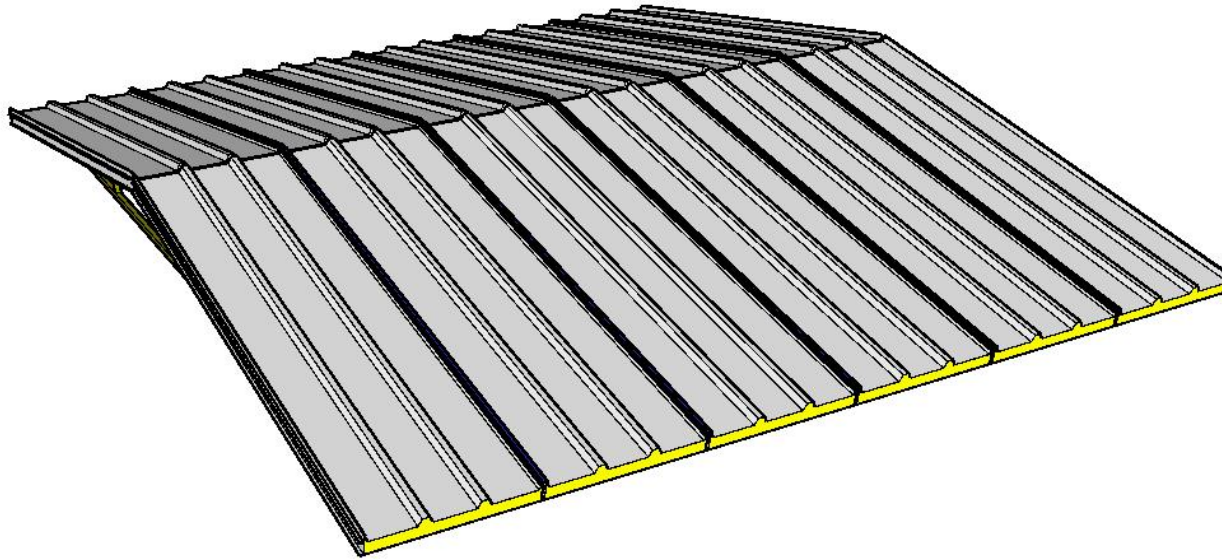

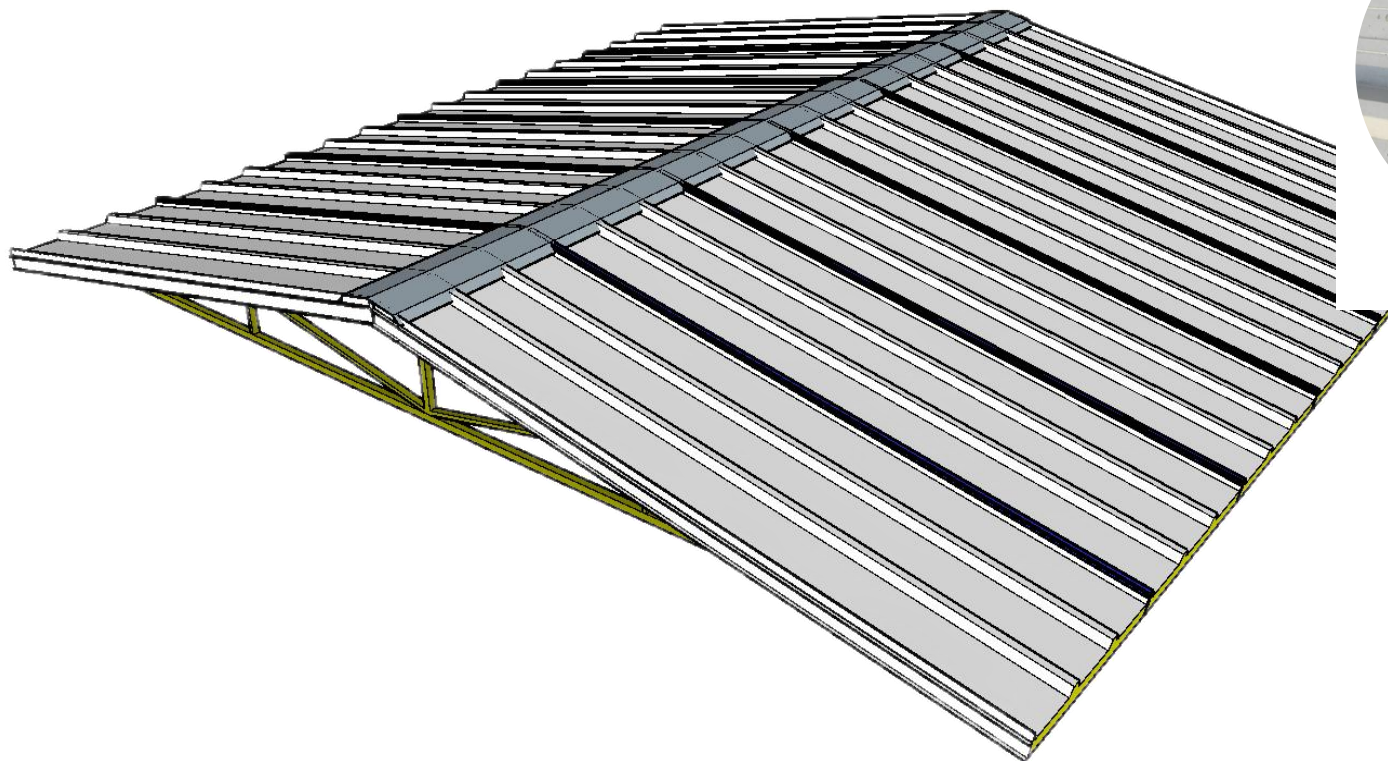

Install the ridge shingles. It looks like this.

Fixed by pulling rivets on steel frame .

Install the top plate and secure it to
the purlins with 100mm drill pins.

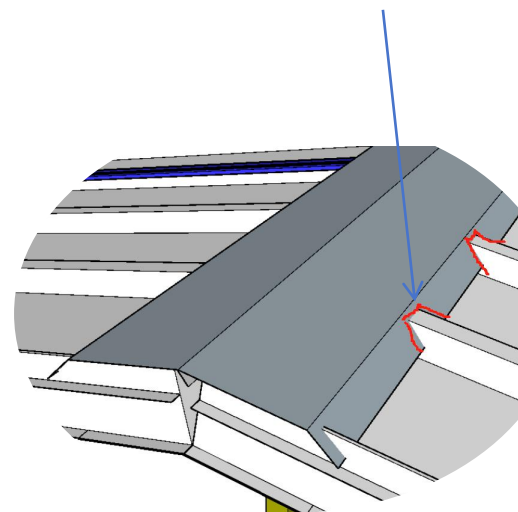

Fixed like this.

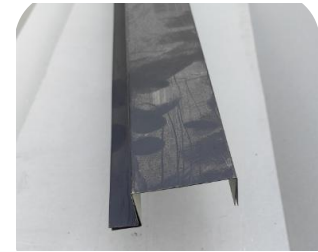

Fix it like this.

Install the outer ridge tile and fix it with the core pulling rivets. The outer ridge tiles should be cut to the same shape as the top plate.

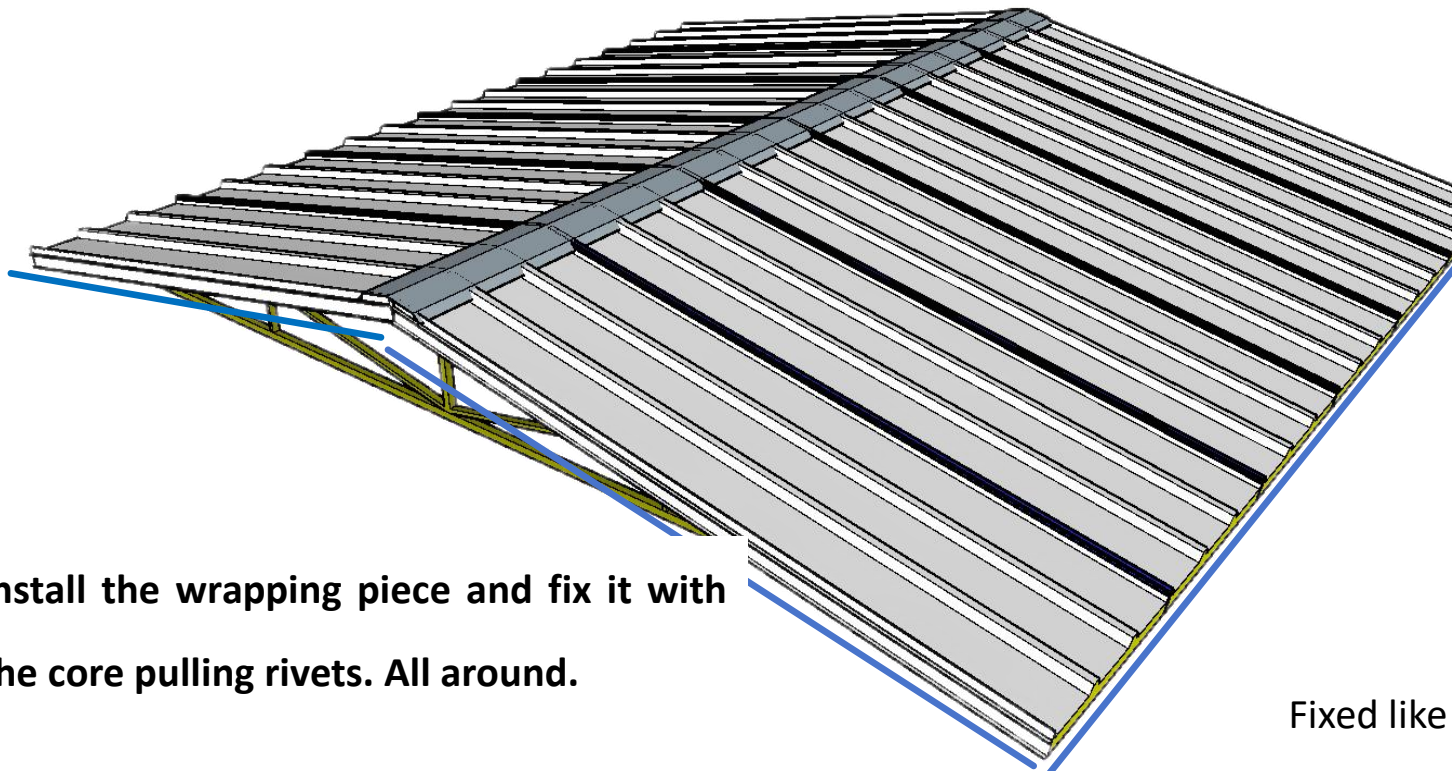

Cut it like this.

It looks like this.

Install the wrapping piece and fix it with the core pulling rivets. All around.

Fixed like this by pulling rivets。
